Target: Sensor Data Engineer

Python-focused data and AI engineer with experience building production data-processing pipelines, validating complex multi-source datasets, and troubleshooting quality issues. Skilled in Python, SQL, statistical modeling, batch processing, and cloud data platforms. Experienced in monitoring production systems, diagnosing failures from source through transformation layers, and improving scalable workflows. Brings an Electronics and Communication Engineering foundation and cross-functional technical communication across data, infrastructure, and business teams.

SKILLS

Programming & Analysis:Python, SQL, Pandas, scikit-learn, XGBoost, Random Forest.

Statistics & Data Quality:Data Validation, Feature Engineering, Model Evaluation, Threshold Calibration, K-Means, DBSCAN, LDA.

Data Systems & Pipelines:Microsoft SQL Server, Azure Databricks, Data Modeling, ETL, Batch Processing, CI/CD.

Cloud & Production:Microsoft Azure, Azure Machine Learning, Azure DevOps, Power BI, Tableau, Looker.

PROFESSIONAL EXPERIENCE

Applied AI Engineer I, Deloitte

Aug 2025 - Present | Texas, United States

- Owned a Python data pipeline that ingested, classified, transformed, and validated heterogeneous audit files into a structured Common Data Model, reducing manual transformation work by approximately 70%.
- Built schema validation and traceability into grounded NL-to-SQL analytics, checking generated queries against source structure and preserving an auditable trail from input data to output.
- Applied LDA, DBSCAN, K-Means, NLTK, spaCy, and HuggingFace models to noisy unstructured data while monitoring batch jobs and investigating model failures and edge cases.
- Maintained CI/CD pipelines in Azure DevOps and used Azure Databricks and Azure Machine Learning for scalable processing, experimentation, deployment, and repeatable production workflows.

Data Scientist, Salesable

Jan 2023 - Jun 2024 | Mumbai, India

- Built Python NLP and speech-to-text pipelines processing 100K+ monthly call recordings, engineering reliable batch workflows that extracted buying signals for near-real-time lead qualification.
- Validated 10M+ multi-source CRM records for duplicates, missing fields, and inconsistent formats, then engineered features and statistical models for scoring, churn, and segmentation.
- Monitored production model outcomes and Looker KPI data, validating results against real business outcomes and coordinating data definitions with research and lead-generation teams.

Data Analyst, Accenture

Jan 2022 - Dec 2022 | Bengaluru, India

- Owned production support for enterprise BI and data systems, monitoring refreshes, connections, and discrepancies while tracing failures across source, pipeline, and reporting layers.
- Designed Microsoft SQL Server structures and optimized SQL queries for large-scale extraction and transformation, supporting timely, reliable Power BI, Tableau, and SSRS reporting.
- Led server migrations and system upgrades with pre-cutover output validation, cross-functional infrastructure coordination, and rollback planning to preserve uninterrupted business-critical reporting.

PROJECTS

Text-to-SQL Dynamic Assistant

- Built a Python, Pandas, SQLite, and Streamlit data application that dynamically ingests external datasets, validates schema context, and produces reliable queryable outputs.

AIEduX - AI Powered Course Creation Platform

- Built a containerized Python microservice system on Google Cloud Run with automated CI/CD, evaluation monitoring, and feedback loops for scalable, production-ready processing.

EDUCATION

Master of Science in Business Analytics & Artificial Intelligence (STEM)(CGPA: 3.84)

University of Texas at Dallas

Aug 2024 - May 2026 | Texas, United States

Bachelors of Technology in Electronics and Communication(CGPA: 3.56)

Jawaharlal Nehru Technological University Anantapur

Aug 2019 - Apr 2023 | Anantapur, India
